How these records are made

TIMES

The crew records each visit in the CoreScape crew app on their phone. The arrival, start and finish times are the moments they tapped Arrive, Start and Finish (or Skip). A phone without signal keeps the visit and sends it when signal returns, with the original times.

POSITIONS

At those moments the app reads the phone's location once. "±" is the accuracy the phone reported. CoreScape does not track anyone between those moments. "From the site" is the straight-line distance to the site's mapped location.

CHECKLIST AND NOTES

The checklist answers, notes and skip reasons are what the crew entered for that visit. A crew member cannot change a visit after finishing it.

PHOTOS

Photos are added by the crew through the app with the visit. The time on each photo is when it was added to the visit.

WEATHER

Daily temperature, snowfall and rain for the site's location come from Open-Meteo (open-meteo.com), a modelled historical weather service, not a reading from a nearby weather station.

IMPORTED RECORDS

Visits marked "Imported record" were brought over from the company's previous software, which recorded only the date of each visit.

AERIAL IMAGES

Esri World Imagery. Pins: A = arrival, S = start, F = finish; the diamond is the site.
