# How these records are made

## CLOCK IN AND OUT

The crew clocks in and out in the CoreScape app on their phone. The times are the moments they tapped. Hours are the time between the two, less the lunch break recorded with the shift.

## POSITIONS

At clock-in and clock-out the app reads the phone's location once. "±" is the accuracy the phone reported. CoreScape does not track anyone in between. "From the address" is the straight-line distance to the project address as found on a map.

## CORRECTIONS

A crew member cannot change a shift once it is recorded. They can ask for a correction, which the office approves; an approved correction replaces the times.

## THE CLIENT'S APPROVAL

An estimate approved online was approved by the client from the link they received: they ticked the agreement and typed their name. The time is when they pressed Approve.

## PHOTOS AND FILES

Photos and files are added to the project by the office or the crew. "Added" is the day they were added.

## AERIAL IMAGES

Esri World Imagery. The diamond is the project address; the dots are clock-in positions.
